

MATERNAL POWER

Longevity

The Speckle Park breed offers a hybrid advantage. These cows have built in longevity, vigor and performance. In the beef industry, that means more profit.

Feed Efficiency

Speckle Park cattle are uniquely built to help producers find efficiencies that reduce overhead costs and increase end-product value.

"There are fewer maintenance requirements to keep a smaller-framed animal healthy. There's a 25% difference in feed intake between a 1,300 pound cow and a 1,600 pound cow. That calculates to around 10 pounds less of hay each day, which adds up to \$1.50 difference in feed costs per day for each animal."

-Barry Yaremco, Ruminant Nutritionist

Powerhouses In Moderate Packages

These females are genetically designed to be powerhouse high producing cows, in a moderate package. Save on your bottom line costs without sacrificing on performance, calf quality and productivity.

SPECKLE PARK
ASSOCIATION

**As the times change, so should our cows.
The Speckle Park breed prides itself on
innovation. These cows are built for our current
times.**

**The Speckle Park female combines the
longtime values of cattlemen - sound structure,
good footed and correct uddered females in a
new more modern, more moderate, more feed
efficient package. These mama cows are
quickly gaining a reputation in the beef industry
as super maternal, easy feeding, easy fleshing,
hard working cows. Their ability to convert feed
into dollars is second to none.**
